# Electrolysis (Permanent hair removal)

Unwanted hair is a common problem affecting around 80% of women to varying degrees prompting the use of various temporary methods of hair reduction. HOWEVER,

ELECTROLYSIS IS THE ONLY PROVEN PERMANENT METHOD OF HAIR REMOVAL.

Many women and men benefit from this tried and trusted treatment.

How does it work?

A fine probe is introduced to the hair follicle where a small amount of current (heat) is discharged at the root of the hair where it receives the nourishment needed for the hair to grow. By repeatedly treating the hair in this way the hair is unable to grow back.
